SuDu Ai

PRODUCT OVERVIEW

SuDu WMS

Supply chain & inventory control

Buy, receive, store, pick, pack and deliver in one system, linked to SQL Accounting.

WHY SUDU WMS

What SuDu WMS solves

PROBLEM 1

Book stock ≠ shelf stock

- Every move is scanned on the mobile app
- Stock updates live by bin and batch

PROBLEM 2

Slow, wrong picking

- Web generates the pick list
- App checks item, bin and batch on scan

PROBLEM 3

No batch or expiry trace

- Batch, serial, MFG and expiry dates
- Trace a lot from supplier to customer

PROBLEM 4

Double key-in to SQL

- Documents post straight to SQL Accounting
- No retyping of PO, DO or invoice

WHERE IT FITS

One platform, three products

THIS DECK

SuDu WMS

- Procurement
- Inventory
- Sales & delivery

PRODUCTION

SuDu MES

- Production orders
- Material issue
- FG receipt

AUTOMATION

SuDu AI Agent

- WhatsApp & AI Chat orders
- Payment reminders
- Reports

SQL Accounting stays your finance master. SuDu reads customers, suppliers and items from SQL and posts documents back. AutoCount is also supported.

HOW IT WORKS

One flow from supplier to customer

INBOUND

Purchase Request
optional

→

Purchase Order
approve, issue

→

Goods Receipt
scan, batch

→

QC / Putaway
as configured

→

Stock
by bin, batch

OUTBOUND

Sales Order
web, app or AI

→

Reserve
available → reserved

→

Pick
mobile app

→

Pack
optional

→

Delivery Order
stock out

→

Invoice
post to SQL

Web generates the task

Mobile app / PDA executes it

SQL Accounting gets the posting

INVENTORY CONTROL

Know where every item is, and its state

Bin locations

- Organisation → Warehouse → Area → Rack
- QR label on every bin
- Scan on putaway, pick and count

Batch & serial

- Batch001 = 100 items, each with its own S/N
- MFG and expiry date per batch
- FIFO or FEFO picking

Stock status

- Available · Reserved · Blocked
- QC · In transit
- Only available stock can be sold

Total stock = Available + Reserved + Blocked + QC + In transit. Stock value by warehouse, area and batch, using FIFO or weighted average.

WAREHOUSE OPERATIONS

Pick, pack and ship without mistakes

STEP 1

Picking

- By item, by zone or by customer
- FIFO / FEFO, full or partial carton
- Wrong item or bin? Alert on scan

STEP 2

Packing

- By handling unit: pallet → carton → loose
- e.g. 1 pallet = 10 cartons, 1 carton = 100 pcs
- Packed by and time recorded

STEP 3

Delivery

- Partial delivery and backorder
- Many DOs for one Sales Order
- Returns go to blocked stock

CONTROLS

Checks that keep stock right

Stock count with approval

- Count on app → variance → supervisor approves → stock adjustment

QC at three points

- Receiving · before delivery (scan code) · after production

Multi-tier approval

- Quotation, SO, PR, PO; tiers by amount, with notifications

Auto reorder

- Min / max + SO sold qty → Purchase Request auto-created → approve → PO

YOUR FLOW, YOUR SETTINGS

Set WMS to how you already work

Setting	Choose one (or more)
Receiving	Direct to bin · Inspection first · Putaway task
Picking	No picking (DO direct) · Pick after SO · Pick after DO
Packing	Off · On (must finish before DO completes)
Invoice from	Completed DO · Issued SO · Direct invoice
Post to SQL at	Invoice (PI, SI) · Delivery / receipt (GRN, DO) — one only
Optional flows	Consignment in / out · Inter-company trading · Cash sales

INTEGRATION

Connected to SQL Accounting, MES and AI

Reads from SQL

- Customers, suppliers, items
- Price book, credit control
- Historical pricing

Posts to SQL

- Purchase: PO, GRN, PI
- Sales: SO, DO, SI
- Stock adjustment, movement

Links to MES & AI

- MES: material issue, FG receipt
- AI: orders become SOs
- AI reads stock to answer

GETTING STARTED

Go live in eight steps

1
Org & plants
Warehouses, areas, bins

2
Users & roles
Access and approvals

3
Master data
Sync from SQL

4
Process rules
Your route settings

5
Opening stock
Template upload

6
SQL connection
Install integrator

7
Route testing
UAT with key users

8
Go live
Daily operation

SUDU WMS

Control of stock is control of cash.

One live stock record for buying, storing and selling, posted to SQL Accounting.
